Outline

- Customizing the App URL
- Create App Launcher
- Creating an Angular SharePoint Context Service
- Introducing a Default Route and App Homepage
- Dynamic Navigation with the SharePoint QuickLaunch
- Adding Busy Message – ‘Working on it...’
- Implementing Learning Path List Page with Sample Data
- Implementing Learning Path Detail Page with Sample Data
- Adding Animations to the App

Introducing the SharePoint Context Service

- **Inspect the current page's querystring**
- **If values found...**
 - Extract values from querystring
 - Store in a cookie
 - Redirect to the app homepage (app.html)
- **If no values found on querystring...**
 - Extract values from cookie
 - Expose as public properties in the service

Summary

- Customizing the App URL
- Create App Launcher
- Creating an Angular SharePoint Context Service
- Introducing a Default Route and App Homepage
- Dynamic Navigation with the SharePoint QuickLaunch
- Adding Busy Message – ‘Working on it...’
- Implementing Learning Path List Page with Sample Data
- Implementing Learning Path Detail Page with Sample Data
- Adding Animations to the App
